Students have multiple ways in which to demonstrate their competency in a specific skill set or proficiency. Enhance formative and summative assessments through live and asynchronous interaction.

**Video Assessments**
When utilized in assessments and face-to-face interactions, videos allow instructors to truly gauge a learner's competency. Learners can relay complex messages through a 10 second webcam recording. Instructors can give immediate feedback to learners who’ve completed assessments to ask follow-up questions.

**Live Assessments**
Live assessments ensure that learners are acquiring the necessary skills that meet the objectives of the desired learning outcomes.

- Conduct live assessments to ask clarifying questions
- Gauge comprehension by analyzing body language, facial cues and thought processes
- Can be recorded for later review

**Additional Assessments**
Options for submitting assessments can also include text, files, true/false and multiple choice.
