Retrieves’s Virtual Teaching System

Competency Sharing
Certifications earned within Retrieve can be shared to different social media platforms or through a URL that is provided. Videos within assessments can also be shared which allow employers to verify the competency a prospective employee has with a specific skill.

Discussion Boards
Transform current discussion boards into dynamic video based collaboration that can be done live or asynchronously. Take it one step further with the web conferencing tool for face-to-face interactions.

Microcredentials
Use the Retrieve system to create stackable credentials that allow your employees to increase their earning potential. We also partner with college institutions that can help you certify your content. These partnerships will then earn your employees college credit.

Searchability
Every piece of content (video, images, text, support, communications) is sent to the cloud, stripped of audio to be transcribed, transcoded, timestamped and fully indexed so it can be searched and even translated into many languages.

Communication
Retrieve offers multiple types of communication such as video-based public chat, private one on one discussions and group chats that humanize the learning experience. Choose to communicate synchronously or asynchronously.

Mobile Usability
The Retrieve system is available anytime, anywhere and on any device. Enjoy the same experience on your mobile device as you would on your desktop computer.

Humanizing the Learning Experience
